ISO Compliance

CERTIFICATE OF CALIBRATION - Calibration of Astro Tool Corp's inspection measuring and test equipment is in accordance with MIL -STD-45662A (ANSI/NCSL Z540-1-1994). The quality system meets ISO9001/AS9000. The accuracy of inspection gaging equipment and measuring standards used in the calibration and/or testing is traceable to the National Institute of Standards & Technology (NIST). Astro Tool Corp operates under a government approved (DCASR-ATL-OQQA) single standard quality control system. A documented recall system is in place to address any M&TE or measurement standard found to be significantly out-of-tolerance. Unless otherwise specified in the contract requirements, the collective uncertainty of the measurement standards shall not exceed 25 percent of the acceptable tolerance for the characteristic being calibrated. Environmental controls have been applied to the extent necessary to assure continued measurements of required accuracy, giving due consideration to temperature (73 +/- 3 degrees), humidity (50% +/- 10%), cleanliness and other controllable factors. Compensating corrections shall be applied to calibration results in an environment which departs from acceptable conditions. Items listed have been duly inspected and found to meet all applicable standards and /or specifications. All supporting records and reports are available for review, by appointment, at our manufacturing facilities.

CERTIFICATE OF CONFORMANCE - Astro Tool Corp certifies that documentary evidence in the form of test reports for raw material and inspection records for all manufacturing processes indicating conformance to applicable specifications are on file and available for review, by appointment, at its home office. The parts so submitted meet dimensional, functional and quality requirements as covered by the applicable purchase order, part number and/or specifications.

If you require further information, feel free to contact us.

Best Regards,

Mike Barnes
General Manager
